The territory of Massachusetts, consisting of about 7500 square miles, is divided into 309 towns. The General Court of the year 1845 passed an Act (Chapter 171) "to obtain statistical information in relation to certain branches of industry." The Act provided that the assessors of each town should, between the first day of May and the first day of October, 1845, make a return into the office of the Secretary of the Commonwealth, of facts falling under certain specified descriptions, as they should be found to have existed in each town on the first day of April of the same year. The Secretary was directed to prepare blank tables, conveniently arranged for the return of those facts, with blank columns for returns of similar particulars not enumerated, and to furnish three copies, with a copy of the law, to the assessors of each town, on or before the first day of May. The assessors were allowed a stipulated sum for each day's service in making and reporting their investigations, to be paid from the treasury of the Commonwealth, and were subjected to a fine for neglect. The Secretary was instructed to prepare and print an abstract from the returns for the use of the Legislature. The result of this action appears in the following pages.

It is probable that the statements are far from presenting a complete view of the industry of the Commonwealth, in either of the departments to which they relate. All the towns made returns, and the assessors are sworn officers. But in some instances, (as in the towns of Ware and Stoughton, in which are one woollen and six cotton mills,) their applications for information were denied, and as, in all instances, the answers of interested parties were voluntary, the disposition to understate the value of property subject to taxation must be supposed to have operated to some extent. The applications of industry in Massachusetts are also extremely diversified; and though the Act required returns of products not expressly referred to therein, it is to be presumed that not a few of these escaped observation. The returns of agricultural products, in particular, are believed to fall far below the truth.

The general plan of the following compilation is the same as that adopted by Mr. Secretary Bigelow, for the same purpose, in 1837. The collection of facts, and the amount of products exhibited, is much larger, as was to be expected from the growth of the population and the increased activity in the manufacturing and mechanical arts, as well as from the more thorough investigation required by the recent law, the more just appreciation of the object prevailing at the present time among our citizens, and the experience acquired by many of the assessors in conducting the former inquiries.

In the following transcript of the town Returns, a few abbreviations of words of constant recurrence have been adopted, which it is believed will immediately become familiar to the reader, and will facilitate comparison, as well as prevent the volume from swelling to an unwieldy size. An explanation of them is given on page 1.

In some instances, the number or quantity of articles manufactured or produced was returned by the assessors, without a statement of the *value.* In such cases, in making up the *tables*, (see page 329 and following), an estimate of the value has been made from the other returns. The same course has been pursued in cases where the *value* of articles manufactured or produced has been returned, without a statement of the number or quantity. In many instances, there has been a failure of returns, both of the amount of capital invested and the number of hands employed. No estimate has been made to supply such deficiencies, except in a few cases of hands employed. The aggregates under those two heads therefore are doubtless very much less than would have been furnished by more complete returns.

Of the "value of all other articles" (see pages 362 and 378) besides those *specified in the tables*, the amount of $2,664,693 is included in the return from Boston, being that of articles of which returns are not made from any other place, with perhaps one or two trifling exceptions. The particulars which make up this amount will accordingly be found on pages 4—7, beginning with "artificial flowers" and ending with "wire work." The balance of the amount, viz. $2,093,691, includes the value of every *manufactured article* in the returns, not entered in any other table; some of which were specified in the returns, and some merely put down in gross, in reply to the inquiry in the Act for the "gross value of all other articles manufactured in the town during said year."

Pins, screws, silk and linen cloth, hemp, brass hinges, and starch from potatoes, are articles specified by the Act, but there is no return

of either. Under "cards" the Act makes no distinction between playing, visiting, wool, and any other kind of cards, and the returns have the same indefiniteness.

In the arrangement of the several articles in the *tables* beginning on page 329, they succeed each other in the same order in which they are named in the Act. The following articles, not inquired for by the Act, have a place assigned them in the tables, on account of their importance; viz. casks, fringe and tassels, boxes, earthen and stone ware, sashes, doors, blinds and frames, lasts, lard oil and dyeing, at the end of the products of manufacture (pp. 359—362); shingles (p. 362), bark and charcoal (p. 363), buck-wheat (p. 369), beef slaughtered for market (p. 368), fish, besides cod and mackerel (p. 366), and oil besides whale oil (p. 365), in connection with similar articles; and milk, maple sugar, poultry and eggs, garden seeds, berries, and broom seed and brush (p. 372), at the end of the list.

In the arrangement of the Summary, beginning on page 373, it seemed at first view desirable to separate the products of manufacture from the agricultural, animal, and other products. But so many articles, as butter, cheese, fire wood, maple sugar, &c., are of a mixed character in this respect, as to prevent such a discrimination from being satisfactorily carried out. The whole are therefore set down together in alphabetical order.

The return required by the Act of the number and value of horses, neat cattle, sheep, swine, asses, and mules, *in the Commonwealth*, in April last, makes these returns unsuitable to be introduced into a summary which in all the other particulars exhibits the products of a single year. They are accordingly arranged in a separate table (p. 377).

The Act requires returns of the quantity of oil, coal, and all other articles, (except cotton, wool, and iron,) *consumed* in manufacturing. These are presented in the table on page 364, but of course are not introduced into the Summary. The Act did not contemplate a collection, to any extent, of facts relating to the amount of raw material used; but a few particulars, in relation to cotton, wool, iron, hides, and some others, will be found under the heads of the related branches of mechanical industry.

In the hope of making some further approach to the completeness of the view, designed by the Act, of the industrial activity and resources of Massachusetts, I have obtained from the Treasury Department at Washington a statement of facts relating to the commerce of the Commonwealth, from July 1st, 1844, to July 1st, 1845. It is given

in Appendix A, beginning at page 379, the facts being arranged in tables, and the columns footed. Appendix B (p. 383) exhibits the population of each county and town according to the last United States census; and the Index, which closes the volume, directs the reader to the full returns of the several towns as they stand arranged alphabetically under their respective counties.

ERRATA.

[The following errors are all corrected in the *Tables*. With one exception, they were true transcripts from the original returns, but, having attracted attention as the sheets passed through the press, a corrected statement has been obtained by correspondence with the assessors.]
